PROFESSIONAL SUMMARY

Motivated Computer Science Engineering student with strong foundations in Core Java, Data Structures & Algorithms, SQL, DBMS, OOPs and problem solving. Experienced in developing full-stack applications and backend systems using Java, Spring Boot, Node.js, React.js, MySQL and MongoDB, along with hands-on experience building Generative AI and RAG-based applications. Passionate about learning new technologies, building practical software solutions, working in collaborative environments, and writing clean and optimized code to solve real-world engineering problems.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering, Chitkara University, Rajpura, Punjab 2023 - 2027
CGPA: 8.51 / 10

TECHNICAL SKILLS

Languages: Java (Core & OOP), Python, JavaScript, C++

Core Subjects: Data Structures & Algorithms, OOPs, DBMS, System Design, Computer Networks

Backend: Java, Spring Boot, Spring MVC, JPA / Hibernate, Maven, Node.js, Express.js, REST APIs

Databases: MySQL, MongoDB, Pinecone

Frontend: React.js, HTML, CSS

Generative AI: RAG, LangChain, LLM APIs (Groq, Gemini), Prompt Engineering, Semantic Search

Tools & Platforms: Git, GitHub, Postman, Docker (Basics), Vercel, Render

AI Tools: Cursor, Claude Code, GitHub Copilot, Google Antigravity

PROJECTS

Medicine Delivery App — E-Commerce Platform

Spring, Spring Boot, Spring MVC, JPA / Hibernate, Maven, React.js, MySQL

- Developed a full-stack e-commerce platform using React.js for the frontend and Spring Boot (Java) for the backend, providing authentication, authorization, product interaction and cart management.
- Designed and integrated REST APIs using Spring Boot and Spring MVC to enable communication between the React frontend and backend services, using Hibernate/JPA (ORM) with MySQL for efficient data storage and retrieval, and Maven for dependency management and build automation.
- Implemented cart functionality using Spring Boot services and repositories to allow users to manage selected products as part of the e-commerce purchasing workflow.

RAG-Powered Document Q&A Assistant

Python, LangChain, HuggingFace, Pinecone, Groq API, PyPDF

- Built a Retrieval-Augmented Generation (RAG) pipeline that ingests PDF documents, chunks and embeds them using HuggingFace sentence-transformer models, and stores vector embeddings in a Pinecone vector database for efficient semantic search.
- Developed a LangChain-based retrieval and response pipeline to generate context-grounded answers from the knowledge base.
- Designed a modular, scalable ingestion workflow (PDF parsing, chunking, embedding, batch upsert) capable of processing multi-document corpora and serving low-latency Q&A over private and unstructured data.

CraftMyFolio — Portfolio Builder

React.js, Node.js, Express.js, MongoDB

- Developed a full-stack portfolio builder using React.js, Node.js, Express.js and MongoDB, enabling users to create and manage professional portfolios.
- Built a responsive React.js frontend with user authentication and an accessible interface for creating and managing portfolio content.
- Developed backend functionality using Node.js and Express.js to handle application requests and provide communication between the frontend and the MongoDB database.

ACHIEVEMENTS

- Solved 200+ DSA problems primarily in Java, strengthening analytical thinking, algorithmic problem solving and debugging skills.
- Presented academic and system-oriented projects, clearly explaining design decisions, implementation approaches and project functionality.
